Username: admin

Password: adminpassword

How I found it?

1. Sniff a traffic on demo website.
2. I found a packet that send GET /grades/ request to the server and get 200 respond status, indicates that it pass the authorization steps. Possibly contains correct credentials.
3. Look through those requests that get 200 OK respond packet and look for Authorization header.
4. Found a username:password !!!!
